

Boardic OSB-3

Boardic OSB-3 board (Oriented Strand Board) is made from wood fibres and glue which are pressed together under high pressure and high heat. OSB board is normally fixed behind plasterboard to enable the suspension of heavy objects on the finished wall. It can also be used in beam structures, walls and roofs. The board is often used for packing.

Boardic OSB-3 boards are available from stock in the following sizes. Of course we can also cut boards to size to meet your requirements.
